OpenID at Digg

Lessons learned so far

Bill Shupp

4/5/2010 - OpenID Technology Summit West

Lessons

- Motivation
- Implementation
- UI/UX

Motivation

(what's taken us so long?)

- Difficulty getting it prioritized over other initiatives
- Initially, a negative perception of the technology ("shitty" UX, security concerns, no single sign out, dislike of auto-login)
- Easier sell now with FBC, RPX, and Twitter proliferation

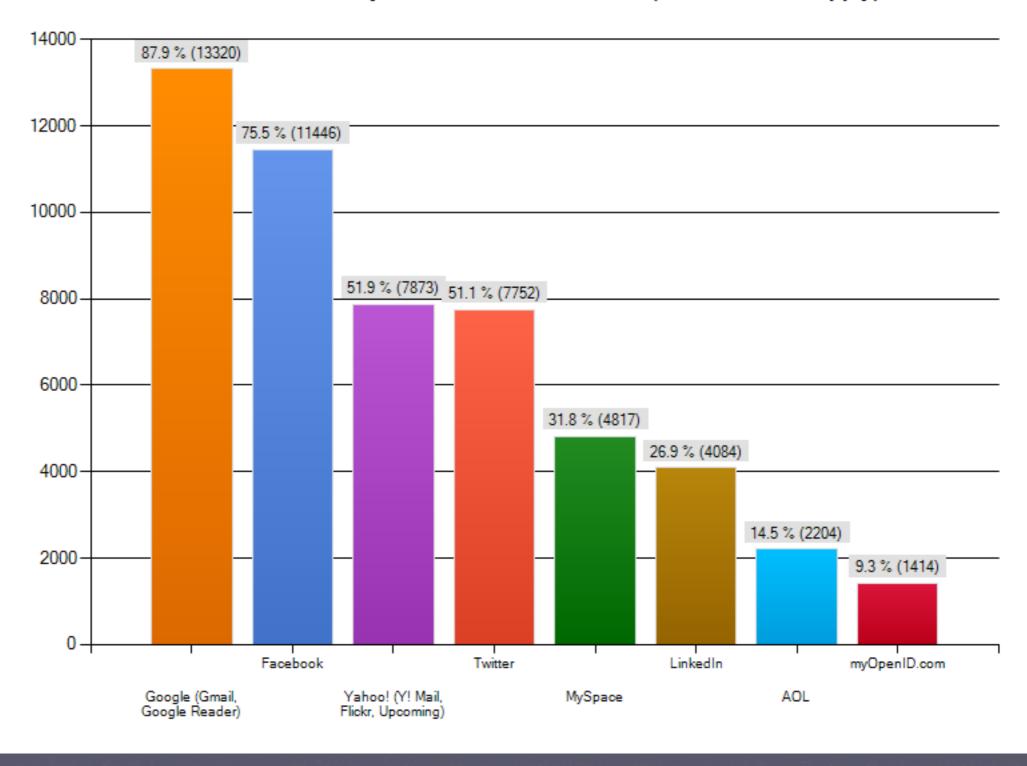

Implementation

- Better libraries needed
- We need a clearer spec for vNext
- Better test tools (continuous integration)

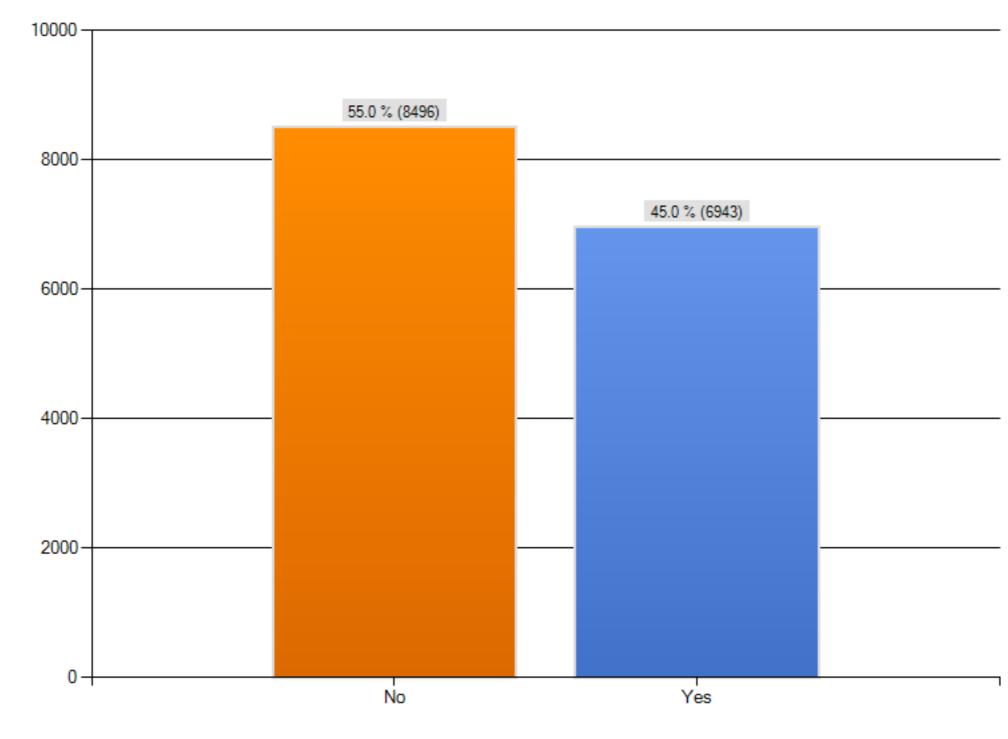

UI/UX

 What providers (OpenID and otherwise) do we feature? (user poll)

Which of these sites do you have an account with? (Choose all that apply)

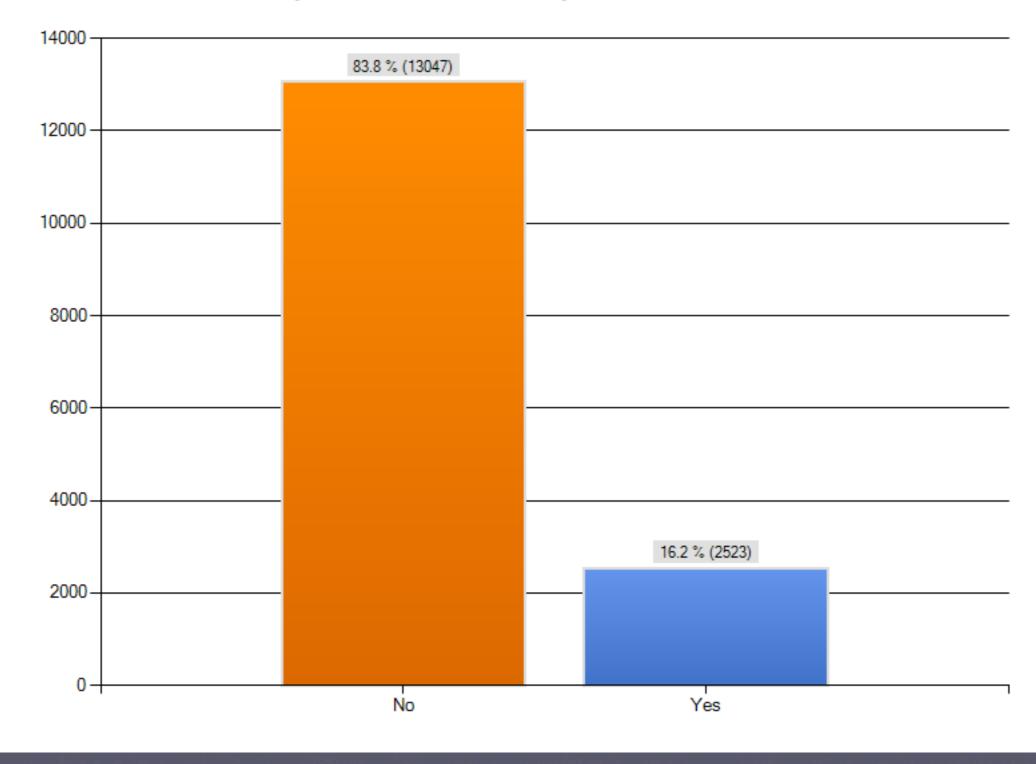

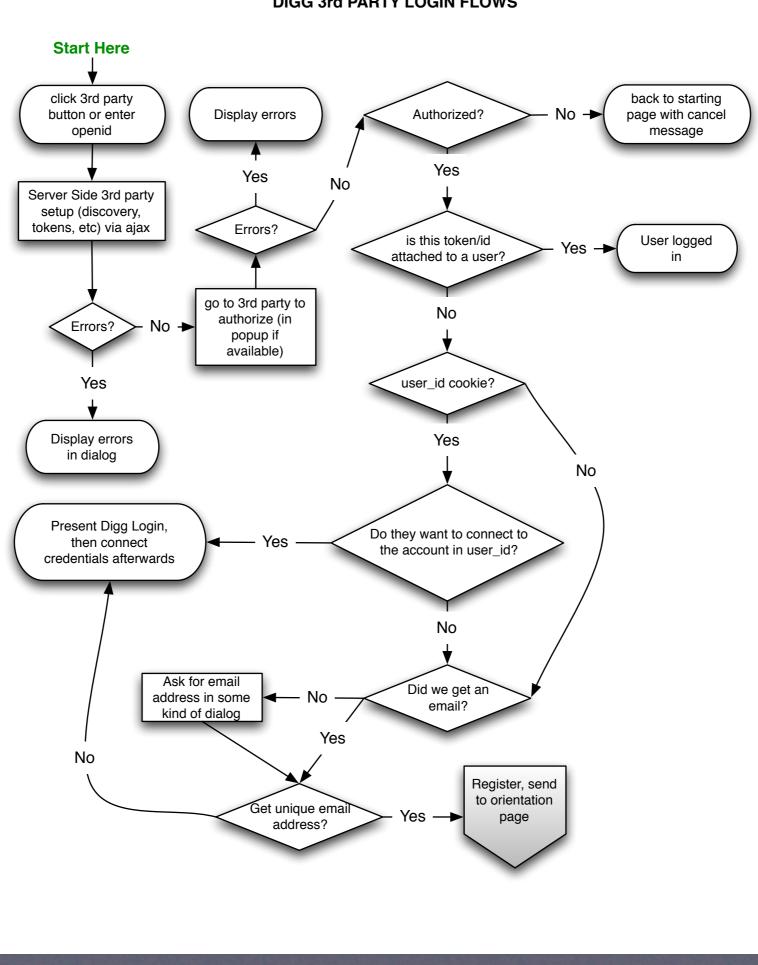

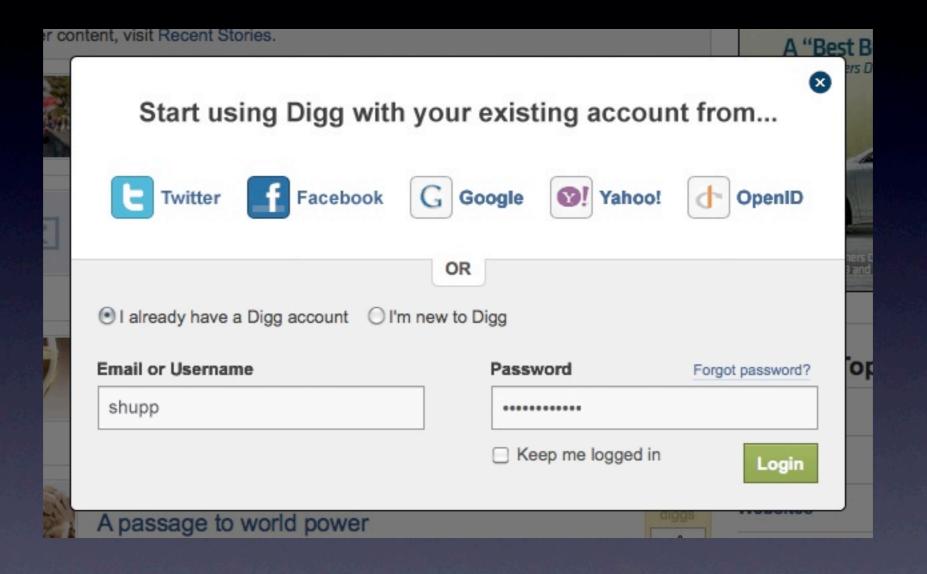

UI/UX

 Can we have streamlined registration process? (amazon + nascar)

DIGG 3rd PARTY LOGIN FLOWS

UI/UX

- Many different experiences (FBC, Sign in with Twitter, OpenID UI extension), harder for developers
- Need for UI libraries
