

**Problems that Meebo faces
distributing multiple 3rd party
identities and services**

Chris Szeto

The Meebo Bar

- Meebo's Bar sits on publishers' sites
- Meebo distributes multiple social services for communication and sharing
- The Meebo Bar is on over 4000 sites and reaches 85M monthly uniques

3 Problems We See

- **Relevance**: figuring out which services users are using right now
- **Performance**: the social web is interconnected – many services, lots of page load
- **Inconsistent Auth**: is OAuth working if not all of your services are using it?

Share Permalink Comments (43)

It was a record Easter weekend at the box office thanks to robust performances by *Clash of the Titans*, Tyler Perry's *Why Did I Get Married Too*, and the animated *How to Train Your Dragon*, which held on well its second weekend in theaters. All told, the three films combined helped lead the box office higher than last year's frame, when *Fast and Furious* opened to \$70.9 million. (Last year at this time was not Easter weekend.)

How do we make these flows more consistent and easier for users to get through?

Summary

- Meebo wants to drive higher engagement for publishers and 3rd party identity and service providers, but...
 - **Relevance**: how do we show smaller, more relevant choices?
 - **Performance**: how do we do this without negatively impacting the publisher site?
 - **Inconsistency**: how can service providers make the auth flow consistent and easier for users?
